Hello Luis,

Sorry for the late reply, Will is currently OOO and will be back next week.

Regarding your question about the proximity of the standalone poles to existing ones - these should be as close as possible, approx 2-4ft from the existing ones. If you need documents to be revised in order to reflect this, please let me know.

Regards.

> Good Morning,

I am updating the application to state that cameras are going to be attached to standalone poles.

In general, how close are the proposed poles placed in relation to the existing streetlights?

Best Regards,

-Luis

Thank you for your response.

That is correct, as we have hardware that is approved on the AML for CalTrans (the XSquared Redi-Torque) we have found it is often faster to plant new, CalTrans approved poles than going through the time to get structural calculations performed on existing hardware as that can add weeks if not months to the submittal timeline. I believe we discussed this shift in November but I know the holidays have been a whirlwind with getting things through!

Let me know if you have any other questions that I can assist with!
Will

> https://www.cityofsantamaria.org/city-government/departments/public-works-services/engineering-division/standard-drawings
>
> If the cameras are still proposed to be mounted on the streetlights, please update the calculations/details accordingly.
>
> Below is an email from Caltrans regarding the previous submittal which included:

- Completed and Signed (by City representative, me) Application
- Authorization of Agent signed by both the SMPD representative and myself giving the City the permission to apply for the encroachment on behalf of SMPD.
- Quick Release Clamp detail for the mounting of hardware.
- Top Pole Mount – Double Solar Panel Detail
- Flock Safety ALPR details for the mounting of the system on a 12.75' pole.
- Top Pole Mount – Double Solar Panel with 2 External Batteries Detail
- Structural Calculations and Detail for a 12.75' pole.

"Luis,

What we need to see with the encroachment permit application regarding the pole and structural calculations are:

1. How the proposed camera, solar panel and batteries will attach to the City streetlight pole.
2. Provide the City standard details or drawings showing the specific dimensions of the streetlight standard.
3. Structural loading calculations (dead load and wind load) for the City streetlight pole with the proposed camera and solar panel system attached demonstrating that the entire structure will be stable."

Please advise.

I will make it a priority to reply to any communications you send.

Thank you.

Best Regards,

-Luis

Mr. Muller,

Thank you very much for your answer, we appreciate it and yours and Mr. Magallons help with this.

Setting up a date and time for now would not be necessary since we got information that we needed, please let us know if you get any feedback from Caltrans.

Regards

> Good afternoon Ms. Jeknic,

Luis is actively working with Caltrans and has been working with Caltrans on behalf of your team and the Santa Maria Police Department. As you may know, Caltrans permitting is a lengthy process. I've been waiting for a permit for a few months myself on a separate project. From my discussion with Luis, it is my understanding that we have not heard back from Caltrans at this time and all necessary materials have been submitted.

If you need to discuss this further with Luis, he is cc'd on this email and can give you or Will a call regarding this permit. Please let Luis know a good date and time to reach out.

Thank you!

Good afternoon Mr. Mueller,

I am reaching out to you on behalf of the Flock Permitting team and in regards to CalTrans permitting for our project with Santa Maria PD, involving installation of 11 Flock Safety cameras within DOT ROW.

My colleague Will Warren, who is cc-ed, was in contact with Mr. Magallon regarding needed documentation for the permitting process up until 18th of November, when he sent updated documentation for the permit. Please note that we do not want to cause any trouble with this email, but we have not received any feedback from him since then and my colleague tried reaching out to him a few times, through emails and phone calls, but we did not get a response.

We just want to make sure that we've filled in complete documentation for this project since it's been a long time since we heard from anyone regarding this, and we would appreciate if you could either help us out with this matter or at least point us to the person that could answer our questions.

Please let me know if you have any questions or concerns.

Regards,

Ljubica
